8 WHAT THE FUCK!!!

8.1 不用递归的 DFS - dfsWithoutDfs.cpp

```
void dfs()
{
    st.clear();
    DFS.push(std::make_pair(root, 0));
    int END = 3;
    while(!DFS.empty())
    {
        pair<int, int> &now = DFS.top();
        if(now.second != END)
        {
```

```
            ++now.second;
            DFS.push(std::make_pair(SON[now.first], 0));
        }
        else DFS.pop();
    }
}
```

8.2 时间结构体

```
const char mon[][5] = {"", "Jan", "Feb", "Mar", "Apr", "May", "Jun", "Jul", "Aug", "Sep", "Oct", "Nov", "Dec"};
const int days[] = {0, 31, 28, 31, 30, 31, 30, 31, 31, 30, 31, 30, 31};
struct Date{
    int year, month, day, hour;
    bool check(int y)
    {
        return (y % 4 == 0 && y % 100 != 0) || y % 400 == 0;
    }
    int getHours() // to 2000.01.01 0 o'clock
    {
        int hours = 1;
        for(int i = 2000; i < year; i++) hours += 24 * (365 + check(i));
        for(int i = 1; i < month; i++)
            hours += 24 * (days[i] + (i == 2 && check(year)));
        return hours += 24 * (day - 1) + hour;
    }
};
```
