12 s.insert(2, "a"); // 在  $s$  的位置 2 插入  $string$  类字符串 "a"
13 s.erase(2, 3); // 从  $s$  的位置 2 开始删除 3 个字符
14
15 //==== 查找 ====
16 s.find("abc"); // 查找字符串 "abc" 在  $s$  中第一次出现的位置 (据说是 KMP 实现的)

```

```

17 //s="aabcc"; printf("%d %d\n",(int)s.find("abc"),(int)s.find("aabb"));
18 //上一行程序应输出 1 -1 (若没找到必须强行转换为int才为 -1 )

```

## 7.4 Java

### 7.4.1 The overall framework

```

1 import java.io.*;
2 import java.util.*;
3 import java.math.*;
4 public class Main{
5     public static void main(String args[])
6     {
7     }
8 }

```

### 7.4.2 Input and Output

```

1 Scanner cin = new Scanner(System.in);//一定记住最后 cin.close();
2 Scanner cin = new Scanner(new BufferedInputStream(System.in));
3
4 //一般直接用 System.out.println();
5 PrintWriter cout = new PrintWriter(System.out);//一定记住最后 cout.
    close();
6 PrintWriter cout = new PrintWriter(new BufferedOutputStream(System.out)
    );
7
8 int n = cin.nextInt();
9 String s = cin.next();
10 double m = cin.nextDouble();
11 String line = cin.nextLine(); // 读一整行
12 BigInteger c = cin.nextBigInteger();
13 while(cin.hasNext()) {};
14
15 //PrintWriter 用 cout.println(...);
16 System.out.println(n + "—>" + s "—>" + m);
17
18 //使用 format 控制格式,与C/C++一样,double用%f,
19 System.out.format("%03d", c).println();
20 System.out.format("%.3f", c).println();
21
22 //变量声明
23 int a, b[] = new int[100];
24 double a, b[] = new double[100];
25 int a[][] = new int[100][100];
26 String ...
27 BigInteger/BigDecimal ...

```

### 7.4.3 BigInteger

```

1 BigInteger a = BigInteger.valueOf(100);
2 BigInteger b = BigInteger.valueOf(50);
3 BigInteger ONE = BigInteger.ONE;
4 BigInteger TWO = BigInteger.valueOf(2);
5 a = a.add(ONE).subtract(b);
6 a = a.multiply(TWO).divide(TWO);
7 a = a.mod(TWO);
8 a.compareTo(ONE); // 大于1, 小于-1, 等于0
9 //BigDecimal 为高精小数

```

#### 7.4.4 String

```

1 String s = "abcdefg"; // 注意0下标!
2 char c = s.charAt(2); // 相当于 `char c = s[2]` (C++)(c = 'c')
3 char ch[];
4 ch = s.toCharArray(); // 字符串转换为字符数组
5 for(int i = 0; i < ch.length; i++) ch[i] += 2;
6 System.out.println(ch); // 输出cdefghi
7 String tmp1 = s.substring(1); // bcdefg
8 String tmp2 = s.substring(2, 4); // cd

```

#### 7.4.5 Hexadecimal Conversion

```

1 import java.io.*;
2 import java.util.*;
3 import java.math.*;
4 // Binary, Octal, Decimal(Integer/BigInteger), Hexadecimal
5 public class Main{
6     public static void main(String args[])
7     {
8         //Decimal(123) to Others
9         String a1 = Integer.toBinaryString(123);
10        String a2 = Integer.toOctalString(123);
11        String a3 = Integer.toHexString(123);
12        //Others to Decimal(123)
13        int b1 = Integer.valueOf("1111011", 2);
14        int b2 = Integer.valueOf("173", 8);
15        int b3 = Integer.valueOf("7b", 16);
16        // Others to BigInteger(Decimal(123))
17        BigInteger c1 = new BigInteger("1111011", 2);
18        BigInteger c2 = new BigInteger("173", 8);
19        BigInteger c3 = new BigInteger("7B", 16);
20    }
21 }

```

#### 7.4.6 function

```

1 Arrays.fill(a, x); // for(int i = 0; i < N; i++) a[i] = x;
2 Arrays.fill(a, l, r, x); // for(int i = l; i < r; i++) a[i] = x;
3 Arrays.sort(a); // 给a的所有元素排序 升序

```

```

4 Arrays.sort(a, l, r); // 给a的[l, r)元素排序 升序
5 Arrays.sort(a, l, r, new cmp());
6
7 import java.io.*;
8 import java.util.*;
9 import java.math.*;
10 class INT{
11     int s;
12     public INT(int x) { s = x; } // 构造函数 INT a = new INT(3);
13 }
14 class cmp implements Comparator<INT>{
15     public int compare(INT a, INT b)
16     {
17         return a.s - b.s;
18     }
19 }
20 public class Main{
21     public static void main(String args[])
22     {
23         Scanner cin = new Scanner(System.in);
24         int n;
25         INT a[] = new INT[100];
26         for(int i = 1; i <= 10; i++) a[i] = new INT(11 - i);
27         Arrays.sort(a, 1, 11, new cmp());
28     }
29 }
30 //a[i].s排序前 10 9 8 7 6 5 4 3 2 1
31 //a[i].s排序后 1 2 3 4 5 6 7 8 9 10
32
33 String s = Integer.toString(n, B); // 把十进制数n转换成B进制数
34 int b = Integer.parseInt(s, B); // 把B进制数s转换成10进制数

```

## 7.5 Batch test

### 7.5.1 @Linux

```

1 mkdata=mk
2 filea=a
3 fileb=b
4
5 g++ $mkdata.cpp -o $mkdata
6 g++ $filea.cpp -o $filea
7 g++ $fileb.cpp -o $fileb
8 cas=0
9 while true; do
10     ./mkdata > $filea.in
11     ./filea < $filea.in > $filea.out
12     ./fileb < $filea.in > $fileb.out
